

Skylite Blinds

BLACKOUT AND DIMOUT

Fourds Skylite blinds come in two formats; Blackout and Dimout. With a wide range of colours, and custom designs it makes them the ideal choice for any style of bedroom, bathroom or study. They are easy to operate with our patented locking system, and are made to measure to enable perfect fit.

The Fourds Blackout range reduce the heat loss in winter and solar gain in the summer, giving comfortable temperatures for all seasons. They provide total light control, giving total blackout when necessary and allowing some light in when needed due to the blind being able to be fixed to any position.

Fourds Dimout range diffuse the light, offering you both the benefits of light penetration and privacy.

Our Skylite Blinds are;

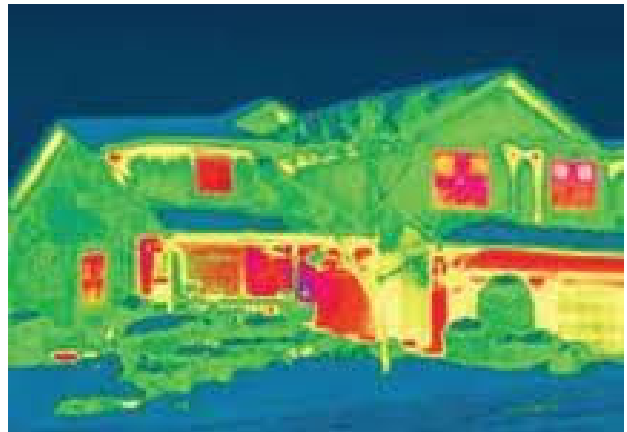

- Made to measure to enable perfect fit
- Available in a range of colours
- Available in customised designs
- Cordless for extra safety
- Solar reflective
- Thermal benefits with verified heat loss savings (BBA Tested to ISO 12567-1:2010)

Energy Saving Features

The blinds are designed with intelligent thermal qualities, **verified heat loss savings (BBA Tested to ISO 12567 – 1:2010)**. This is made possible by the thermal fabric and the 'sealing effect' of the blind, which traps the air between the fabric and the glass. By preventing air from circulating around the window air from the room is stopped from being cooled by the glazing pane.

The thermal image below shows the extent of heat loss through the home during the winter months, the red areas being the ones where most heat is lost.

During the summer months the white reflective backing on all the fabrics reflects the sun's rays and therefore stops the sunshine from heating the room.

Installation & Operation

Installation is simple, requiring just a screwdriver.

Installation videos can be viewed on our website and are available on request.

Hand operated with our patented two part Roto lock system, rotate the hand rail to move the blind up and down.

Measuring Guide

Every manufacturer has a manufacturing code and our website details where to find these codes along with a list of prices.

Custom skylight blinds are also available so please refer to our website for more information on how to measure.

Electric Solar operation
launching in March 2011

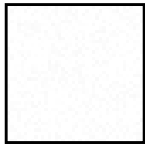

Specification

- Custom made blinds to suit roof light manufacturers; Velux®, Fakro®, Roto® and Rooflite®
 - Anodised aluminium profiles giving strength and stability
 - Injection moulded plastic components
 - 1.5kg/3kg torsion spring
 - Cordless system – patented two part roto lock system
 - Reflective backing making it cool in summer and warm in winter
- * We do not make for old style GGU/GPU PVC windows (105° angled frame and rounded corners)
